TECHNOLOGY INSIDER

Is it time to be more like Alex?

Here's a story about a business owner named Alex. Alex runs a successful marketing agency, and business has been booming. But with growth comes growing pains, and Alex has found himself increasingly bogged down by IT issues.

At first, Alex tried to handle everything himself. After all, he was pretty good with computers. And for a while it seemed to work. Alex managed to fix minor issues and keep things running. But then, one Monday morning, disaster struck. Malicious software had infected the company's main server, crippling their operations. Alex spent days trying to fix the issue, losing valuable time and money in the process. It was a wake-up call: Doing it himself wasn't a sustainable solution.

Determined to avoid another disaster, Alex decided to train his top employee, Sarah, to handle IT alongside her regular duties. Sarah was smart and quick to learn, but the additional responsibilities quickly became overwhelming. She found herself stretched too thin, and her productivity in her main role started to suffer. Not to mention, the fast-paced tech world was hard to keep up with, and soon, Sarah felt like she was drowning in a sea of updates and security threats.

Realising this wasn't working, Alex considered hiring an in-house IT team. But the costs were daunting. Recruiting skilled professionals, providing ongoing training, and equipping them with the right tools would require a significant investment. For a mid-sized business, this was a heavy financial burden.

That's when Alex discovered the benefits of outsourcing IT. He found a reputable IT service provider with a team of experts ready to step in.

Here's what Alex found:

- 1. Expertise on tap:** The outsourced IT team brought knowledge and experience. They were always up to date with the latest technologies and security threats, making sure the agency's systems were secure and efficient.
- 2. Cost savings:** Instead of paying salaries and benefits for a full-time team, Alex paid a monthly fee based on the services he needed. This was a much more affordable solution.
- 3. Focus on core business:** With IT taken care of, Alex and Sarah could focus on what they did best – growing their business. Productivity soared, and so did their client satisfaction.
- 4. Scalability:** As the agency continued to grow, the outsourced IT team easily scaled their services to meet the increasing demands. No need for Alex to worry about hiring more staff or buying new equipment.

By outsourcing IT, Alex not only solved his immediate problems but also set the stage for sustainable growth. The agency was now protected from cyber threats and was running smoothly, all without the hefty price tag of an in-house team.

Alex's story is a great example of why outsourcing IT is a smart move. It frees up time and resources, allowing you to focus on what you do best, while experts handle the complexities of IT.

So, if you're still trying to juggle IT responsibilities with other tasks, consider taking a page from Alex's book. We can help you with that, get in touch.

DID YOU KNOW...

**CYBER
EXTORTION HAS
INCREASED BY
96%**

Cyber extortion is when cyber criminals threaten to damage, steal, or expose a business's digital data unless a ransom is paid. **And the number of victims has grown 77% year on year.**

In the UK, attacks have risen by 96% **and any business of any size is targeted.**

To stay better protected, the usual advice applies:

Make sure all software is up to date, back up your data, and implement multi-factor authentication (where you get a code on another device to prove it's you).

TechFacts

1 In 2002, Welsh website llanfairpwllgwyngyllgogerychwyrndrobwlllantysiliogogogoch.co.uk won the title for the longest website URL in the world. It lost the title in 2006, when 6 other people registered longer URLs, but in 2007, the Welsh URL was upgraded from 63 to 68 characters and regained its title.

2 The first computer password is believed to have been created in the 1960s, by Fernando Corbató, who worked on the Compatible Time-Sharing System (CTSS) at MIT. He created it so that several people could share the computer he built.

3 The microwave oven was an accidental invention. A researcher, Percy Spencer, discovered that every time he walked past a cavity magnetron tube the chocolate bar in his pocket melted.

Technology update

Average ransomware demands are soaring

Cyber criminals are getting confident. And they're asking for obscene ransoms to give you back your data after a ransomware attack (that's where they lock or encrypt your computer files and demand payment to unlock or decrypt them).

The average demand in the first half of this year? **More than \$5 MILLION (around £3.85 million).** It's time to get the right security measures in place.

INSPIRATIONAL QUOTE OF THE MONTH

"Transparency within your organisation is the difference between having a business that's simply running and having one that's moving in one direction."

Michael Riedijk, CEO of PageFreezer Software

NEW TO

MICROSOFT

Excel on the web has a revamped look

Microsoft is giving Excel on the web a facelift. It has new features that make it faster to add and resize rows and columns, rearrange elements with drag and drop, to highlight critical information, and improve readability.

The Excel app for Windows and Mac has also got new features, such as checkboxes and support for OpenDocument format.

Let's go back to school with September's fun tech quiz

1. What language is used most on the internet worldwide?
2. How many apps are in the Apple App Store?
3. What's the official name for the "prove you're not a robot" test?
4. What does URL stand for?
5. What was the first emoticon ever used?

The answers are below.

1. English
2. Almost 2 million
3. CAPTCHA. It's an acronym for Completely Automated Public Turing test to tell Computers and Humans Apart
4. Uniform Resource Locator
5. :-). In 1982 by computer scientist Scott Fahlman. Emoticons are made up of keyboard characters, whereas emojis are little images

Cyber security is a team effort

There are loads of important things you need to think about for your business. Loads. But we're adding another one to your list: Cyber security awareness. You'd be forgiven for thinking this is an IT problem; something for them to sort out. Sorry to say, but you're wrong. It's something that every single person in your company needs to be on top of, from the big boss to the latest hire.

You see, cyber threats are always changing and getting more sophisticated. A one-time training session just won't cut it. You need to keep everyone in the loop with regular updates. Think of it like this – in the same way you need regular check-ups to stay healthy, your team needs regular cyber security training to keep your business safe.

What does this training look like? There are a couple of ways to do it. First, there's the good old traditional method – you know, lectures and presentations. One way training. These are great for laying down the basics and introducing new concepts. But let's be honest, they can be a bit... boring.

That's why it's a great idea to mix in some interactive training too. Imagine phishing simulations where your team learns to spot fake emails before clicking on them. Or hands-on workshops where they can use the security tools and protocols they've been hearing about. These methods are not only more engaging but also help the info stick better.

Combining these traditional and interactive methods is where the magic happens. Start with some solid grounding through presentations, and then get everyone involved with practical exercises. This way,

the knowledge isn't just in one ear and out the other – it's learned, remembered, and applied.

Let's talk frequency. Since cyber threats are always evolving, training shouldn't be a once-a-year thing. Regular sessions throughout the year will keep your team sharp and ready to handle anything that comes their way.

Creating a strong cyber security culture in your company is key. This means making cyber security everyone's responsibility. Encourage a culture where if someone spots something fishy, they speak up right away. Communication is super important here. And remember, this starts at the top. If the leaders in your company are taking cyber security seriously, everyone else will too. So, make sure the big shots are not only participating in the training but also showing how important it is. Lead by example, right?

Cyber security is something that affects the whole business. Every email, link, and password matters. By making sure everyone is trained and aware, you're building a strong first line of defence against cyber threats.

We can help you get your team started - get in touch.

361 business owners trust us to keep their businesses running every day, and you should join them.

We specialise in Business IT Solutions & Telecoms tailored to your specific needs. Our services are flexible, straightforward, and free from jargon, designed to evolve seamlessly with your business. We pride ourselves on a no-hard-selling approach, no long-term contracts, just the right advice without the unnecessary hassle.

- Have IT Problems? We provide support for your computer systems (we are an MSP - Managed Service Provider).
- Enhance your online security with our Cyber Security Services, including email protection, network monitoring, antivirus, ransomware, and malware protection.
- Prepare for and obtain Cyber Essentials Certification with our assistance.
- Utilise Office 365 for email and Office software on your PCs and laptops.
- Experience the flexibility of working from anywhere with our Cloud Services.
- Ensure the safety of your data with automatic backups for servers, PCs, and laptops.
- Upgrade your wireless network with the latest WIFI 6 access points for high-speed internet throughout your premises.
- Get reliable data cabling for computers, phones, and CCTV, including CAT5 and CAT6.
- Source your IT hardware needs, including Servers, PCs, Laptops, and Peripherals.
- Optimise your office printing with our Managed Print Services, featuring multifunction printers. (Print, Copy, Scan & Email)
- Stay connected with the latest VOIP telephone systems from Yealink & 3CX
- Access fast and reliable internet connections with our Fibre Broadband and Leased Lines.
- Secure your premises with the latest digital IP CCTV systems.
- Enhance your online presence with our website services, covering design, hosting, and SEO optimisation.

One important thing, we don't have any sales people so we'll only ever focus on how we can actually help your business, not on commission rates or sales targets, there's no pressured sales tactics, just no faff.

Get in touch, our advice is free.

FIND US AT: Meridan House, 5 Longworth Rd, Horwich, Bolton. BL6 7BL

Q: Should I let my employees use company apps on their personal phones?

A: Ideally not, because you have less control over the security of personal devices. If they need to work on a phone, better to provide a company-issued one.

Q: Should I ban my team from working in coffee shops because of public Wi-Fi dangers?

A: You don't have to. Just make sure they're aware of the risks of using public Wi-Fi and that they're vigilant when connecting to new networks.

Q: Should we delete phishing emails, or should they be reported?

A: Any spam or phishing emails should be flagged as such because it teaches your email provider what spam looks like. You can also forward it to The National Cyber Security Centre report@phishing.gov.uk
